

Why CI/CD

	Benefit	Value	Explain
	Faster release rate	New value-generating features released more quickly	CI/CD Fosters a culture of innovation, allowing developers to experiment with new technologies and try out new ideas. Teams can test different features with real users in parallel and use their findings to ensure.
	Faster error resolution time. Smaller code changes	Save time of developers in detecting bug and fixing it. Avoid major bug from changing a huge part of code at one time	CI/CD automation can eliminate manual tasks, prevent coding errors, detect problems before deployment, allowing teams to work faster without compromising quality. It standardizes deployment processes across all projects, and, done right, it enables teams to systematically test every change made to the source code.
